Companies on this list must have at least a few varieties of pollinator-friendly organic seed available. Unless specified 100% organic, the company may sell conventionally-grown seeds as well. Be sure to check before purchasing. For more details, see the full list on our webpage at <http://bit.ly/PollinatorSeeds>. If you know of a company that is not on this list, please send an email to info@beyondpesticides.org to let us know.

Organic Nurseries that Distribute Plants Nationally

In addition to the seed companies selling plants, starters or seedlings listed on the previous page, below is a list of organic nurseries that will ship live organically grown plants throughout the U.S. In addition to these large-scale organic nurseries, there are many small farms, gardens and local nurseries that grow organic plants that are available for sale in your own community. We encourage you to ask for organic plants at your local nursery, farmers market, community garden, or other local retail stores.

Company	Location	Website	Contact
Brightflower Farm	Illinois	www.brightflowerfarm.com	jeaniem@brightflowerfarm.com
Crimson Sage Nursery	California	www.crimson-sage.com	530-627-3065
Native Springs Nursery	California	www.nativespringsnursery.com	530-774-4360
The Natural Gardening Company	California	www.naturalgardening.com	707-766-9303
Rolling River Nursery	California	www.rollingrivernursery.com	530-627-3120
Walden Heights Nursery and Orchard	Vermont	waldenheightsnursery.com	802-563-3012

A note about untreated seeds

Although many seed companies indicate that they sell untreated seeds, Beyond Pesticides encourages supporters to avoid purchasing these products. While untreated seeds surely are a step in the right direction, they do not ensure that the seed production practices are protective of bees or that residual chemicals do not contaminate the plant. Seeds and plants that are certified organic, on the other hand, do not permit the use of toxic synthetic pesticides, chemical fertilizers, genetically modified organisms, antibiotics, sewage sludge, or irradiation.

BEE Protective

As bees suffer serious declines in their populations, we urge people and communities to plant habitat that supports pollinator populations, and have provided information to facilitate this in our BEE Protective Habitat Guide, which can be found on our website at <http://bit.ly/BeePHabitatGuide>. However, plants are too often grown with hazardous pesticides that either harm pollinators in their cultivation or threaten bees as they pollinate or forage on treated plants. Certified organic seeds and products are really the only way to ensure that the seed production practices are protective of bees, and that residual chemicals do not contaminate the plant.

With one in three bites of food reliant on bees and other insects for pollination, the decline of honey bees and other pollinators due to pesticides, and other man-made causes demands immediate action. For more information on how to truly bee protective, join our campaign to protect honey bees and other pollinators from pesticides and contaminated landscapes by taking action at www.BeeProtective.org.

If you know of a company that is not on this list, please let us know by sending an email to info@beyondpesticides.org!

Pollinator Friendly Seeds and Plants

Growing plants to protect managed and wild bees, butterflies, birds and other pollinators

Given that plant starts in many garden centers across the country are grown from seeds coated with bee-harming neonicotinoid pesticides, or drenched with them, Beyond Pesticides has compiled a comprehensive directory of companies, organizations and farms that sell organic seeds and plants to the general public. Included in this directory are seeds for vegetables, flowers, and herbs, as well as living plants and seedlings. Specific questions on each seller's seeds can be directed to their customer service line.

BEYOND PESTICIDES

701 E Street SE, Washington DC, 20003
